Alex Norton's Brand Statement

Full stack junior developer, entering the field as of recently, with the purpose and passion for building and maintaining full stack web applications.. I recently underwent a course at the University of Minnesota Coding Bootcamp. We studied numerous web development languages including HTML, CSS, JavaScript, Node, Express, MySQL, MongoDB, React along with full stack applications based on MERN with the CRUD functionality. I've been working on my homework and class assignments diligently as well as attempting to build my own websites for myself and those close to me. My skills in the workplace include attention to detail, diligence and organization as well as being known to work well in a team and one on one with single individuals. For each of my projects, I specifically target the ability to be user friendly, easy to navigate and a pleasant aesthetic. I'm most excited to join a team who happens to be just as motivated and detail oriented as myself. If given the opportunity, I would shine on a team given the proper direction and work related training necessary to complete my tasks. Thank you for taking the time to read this brief explanation of my skills and abilities.
